TITLE : TERMINAL DEVICE AND ITS
CONTROL METHOD, INFORMATION
REGISTRATION SYSTEM, AND
STORAGE MEDIUM

ABSTRACT : PROBLEM TO BE SOLVED: To easily register information by providing a means which inputs delivered information, a means which requests the issue of the number of a distribution information discrimination code to which a code for information discrimination is added, and a means which outputs information registered on a server by correlating it to the number-issued code.

SOLUTION: A P service server 200 is composed principally of a P service terminal 100 and a P service server 200. The P service terminal 100 is installed for public use, and communicates with the P service server 200 to obtain and print information corresponding to a P code inputted by a user. The P server 200, on the other hand, issues the numbers of P codes for provided information, and registers and manages them in a P code database. Then information corresponding to a P code inputted from the P service terminal 100 is obtained and print data are generated and outputted to the P service terminal 100.
